

Loaring Physiotherapy & Health Centre

Tecumseh, Ontario, Canada - Completed in 2008

Passa Associates Architects was requested by Loaring Physiotherapy & Health Centre to design the interior of their expansion and relocation to an existing commercial plaza development. The renovated 5,400 sq. ft. state of the art facility takes all of the client's goals into consideration including: artistic vision, innovation, privacy, safety, client and staff comfort, customer service, natural light, audio - visual capabilities and educational / resource space.

The space is divided to provide a open space gym area, waiting / reception area and area for physiotherapy beds to be located. The remaining smaller and enclosed areas are staff offices, physiotherapy treatment rooms, therapeutic massage rooms, washrooms, storage areas, staff / conference room and laundry facilities.
