

Clear Medical Imaging

Windsor, Ontario, Canada - Completed 2019

Passa Architects was requested by Windsor Radiological Associates to investigate various design options for a new or renovated main facility in downtown Windsor. The new facility was to provide a new image for the company and coincided with the company's name change to Clear Medical Imaging. After various options were reviewed and discussed, the Owner decided on a new building facility that would be two storeys high with a full basement space offering additional future expansion space. The final layout of the building provided a total of 13,590 sq. ft. of clinical and office space (including basement) built on their existing site but was designed so that construction could occur while the existing facility continued to operate. Eventually the existing structure was demolished once operations transitioned over to the new facility and the new parking lot was built on the former building location. The new facility offers a clean, modern appearance accented in the new company colours complete with expansive sections of glazing providing ample interior daylighting.
